Lockheed-Georgia's Proposal for Three-Dimensional Boundary-Layer Computations (L17-1824)

The undersigned has performed the technical analysis of the subject proposal. The direct labor and computing hour requirements are reasonable and acceptable. However, the contract should be broken into two parts. The first part would include the work of the Lockheed Georgia Work Statement listed as Stage 1. The second part would then include the work of the Work Statement listed as Stage 2.
