

Entry 1

**PROJECT CORRESPONDENCE FILES, 1918-1978**

59 cu.ft.

These are record files of official correspondence, pertaining to specific NASA projects, that were kept by the Langley Research Center. The records are arranged alphabetically in reverse chronological order. There are two types of records. Unclassified records and recently de-classified records of what was formerly classified material. **All recently de-classified materials in this series will be denoted using bold print in this finding-aid and will have (F.C.R.)--which stands for formerly classified records--written on the folders.** Each entry in this finding- aid will be listed by project name, date of files, box number, and shelf location of the files.

The records in this series are textual, photographic, and graphic in form. Textual records will consist mostly of, but will not be restricted to, status reports on NASA projects, internal memos, proposals for experiments, flight tests, wind-tunnel tests, and official papers on NASA programs. Photographic records consist mainly of pictures of various types of aircraft and spacecraft, layouts of airplane cockpits, accident wreckage, displays of new pressure suits and equipment. Graphic records will deal primarily with telemetry data from various NASA flight test programs dealing with aircraft, rockets, and missiles; wind-tunnel charts; and diagrams of aircraft.

This series provides researchers with an in-depth look at the Langley Research Center when it was *the* premier aeronautical and aerospace facility in the world. The records in this series cover Langley's valuable contributions, in terms of scientific knowledge and use of Langley facilities, in the fields of supersonic and hypersonic jet flight; satellite development in the commercial and scientific sectors; rocket and missile development for military and civilian use; and NASA's space flight program, to name a few examples.

The largest project files in this series deal with the D-558 Douglas Skyrocket (and its off-shoots, the D-558-I and the D-558-II--the first plane ever to reach Mach 2; the Dyna-Soar (an early precursor to the Space Shuttle); the Mercury and Gemini space programs; and the X-1, X-2, and X-15 experimental flight testing programs which allowed NASA to explore the supersonic, thermal, and hypersonic flight regimes, respectively.

Researchers should note that frequent use of Langley's wind-tunnels during the development and pre-flight testing of early missiles, jet-planes, and spacecraft are a dominant feature in this series. Another item of interest for researchers are the periodic status reports sent from Edwards Air Force base in California to Langley concerning experimental flight test programs. The official status report of Chuck Yeager's historic first supersonic flight in the X-1 can be found in the X-1 (FCR) file. The accident report of Milburn Apt's fatal X-2 flight where he flew at Mach 3 can be found in the X-2. A letter personally autographed by the late NASA astronaut Donald K. "Deke" Slayton can be found in the Skylab project file. The names of many famous pilots and astronauts can be found in this series: Neil Armstrong, Chuck Yeager, Scott Crossfield, to name a few.
