Center Director has approved installing a satellite cafeteria in the Aeronautics Gallery area of the Visitor Center—after it is emptied around the end of CY91. The satellite cafe will be a modular, paper product (no dishwash) operation supplied largely from the main cafeteria.

The requirement on this request is for engineering (FENGD, hopefully) to work with this requester and the Cafeteria Manager to scope the needs in 1202 to accommodate the modular cafeteria equipment. This would include, as a minimum:

- Power availability (power requirements are relatively small)
- Water availability (again, probably relatively small, it seems)
- HVAC
- Structural suitability (ceiling, lighting, etc.)
- Cost estimate, schedule, etc.
