Moving LEMS

The Apollo Lunar Excursion Module Simulator, used to train astronauts who walked on the moon, was moved from NASA's Langley Research Center Friday to the New Horizons Technical Center. There, students will restore the landmark and prepare it for display in the proposed Virginia Air and Space Center in downtown Hampton. The module was part of the Langley Lunar Landing Research Facility, which was built in 1965. Carl Baab, above, was the supervisor of the Lunar Landing Training. Pee Wee Shreaves prepares the module for removal.
